Assemble

Assemble

Introducing an edgy solution to desktop power and data needs that takes your business where you want it to go... even if it's just from one room to the next. Byrne's portable convenience outlets bring new flexibility to the table, because they don't require cutouts to work surfaces. These power and data centers attach to the edge, fitting surface tops of varying thicknesses. Alternate mounting options are also available. Constructed out of clear anodized aluminum, they are scalable to meet varying power, data, and audio/visual requirements.

Assemble Reveal

Designed to have no impact on the work surface, that means no holes to drill or cut. This makes Reveal a perfect solution for executive workstations and boardrooms. Hidden away until needed, the Reveal presents itself on a sturdy ball bearing track and locks into place. A one-touch operation lets you simply slide it back into the stow position. Constructed of clear anodized aluminum, Reveal is scalable to meet varying power, data, and audio/visual requirements.
