# Branching Power Desk Kits

---

Byrne's Desk Branching Kits for single workstations make powering any desk a snap – no special skills or in-surface installation. And just one wall outlet required. Our kits are a no-stress way to quickly power both fixed height and height adjustable desks. Preconfigured corded solutions that offer power and charging up top – right where you need it – and even more power below with bulky cords neatly out of sight. Branching Kits were developed with thoughtful consideration of both the location of power access, along with the amount of power needed - creating preconfigured solutions that work how you work. Clever combinations of desktop power, mounted at the front or back of the desk, or freestanding on the work surface makes plugging in laptops and other technology a breeze. Under desk, utility power, is just the thing for items that tend to stay plugged in. So all of your devices are always charged up - and right where you need them. With clean, compact designs, Desk Branching Kits keep cord clutter managed, and your workspace looking tidy. Everything you need to be your most productive, and most powerful.
