# Interlink iQ 2.0

---

Byrne's Interlink iQ 2.0 may actually be a few IQ points higher than our original. This sleek, easy-to-install power system still has the ability to connect and re-connect up to eight units in any order – making it perfect for training tables and other flex spaces. But this version also features new and improved connectors with plenty of power to go around. And best of all, it's a completely listed solution (ETL) – so your furniture doesn't have to be. Interlink iQ 2.0. It doesn't get much smarter than this.
